Notice to Our Valued Customers,

Subject: Melbourne Empty Container Parks - Using Containerchain system.

Containerchain information system has been progressing with Melbourne empty container parks for some time. With all trials completed they have now announced the implementation effective immediately.

Accordingly with this notification container transport operators are now required to open an account with Containerchain and pay a container processing fee for every container gated in or out at empty container parks.

The Containerchain system is operational as from this week and designed to improve efficiencies at empty container parks and operational processes for the industry.

Transport operators will have additional administration responsibilities and costs as they're required to process data through online entries via the Containerchain system. Extra duties will also include managing the notification process and controlling container movements timely with the empty container parks.

It is with regret due to the extra costs and requirements that we will have to pass on an additional fee of $15.00 to be levied on all container movements effective as from Thursday 8th September 2011.

We apologise for the short notice however this was only confirmed to us this week.

Thank you for your understanding and valued support.

Should you require further information, please feel free to contact us.

Thanks & Kind Regards
